NZB file format

Filename extension	.nzb
Internet media type	application/x-nzb
Developed by	NewzBin
Latest release	1.1 (November 10, 2009; 7 years ago)
Type of format	Usenet extender
Extended from	XML
Open format?	yes
Website	NZB file specification

NZB is an XML-based file format for retrieving posts from NNTP (Usenet) servers. The format was conceived by the developers of the Newzbin.com Usenet Index. NZB is effective when used with search-capable websites. These websites create NZB files out of what is needed to be downloaded. Using this concept, headers would not be downloaded hence the NZB method is quicker and more bandwidth-efficient than traditional methods.

Each Usenet message has a unique identifier called the "Message-ID". When a large file is posted to a Usenet newsgroup, it is usually divided into multiple messages (called segments or parts) each having its own Message-ID. An NZB-capable Usenet client will read all needed Message-IDs from the NZB file, download them and decode the messages back into a binary file (usually using yEnc or Uuencode).

File format example[edit]

The following is an example of an NZB 1.1 file.

```
xmlns="http://www.newzbin.com/DTD/2003/nzb">

   type="title">Your File!
   type="tag">Example

 poster="Joe Bloggs " date="1071674882" subject="Here's your file!  abc-mr2a.r01 (1/2)">

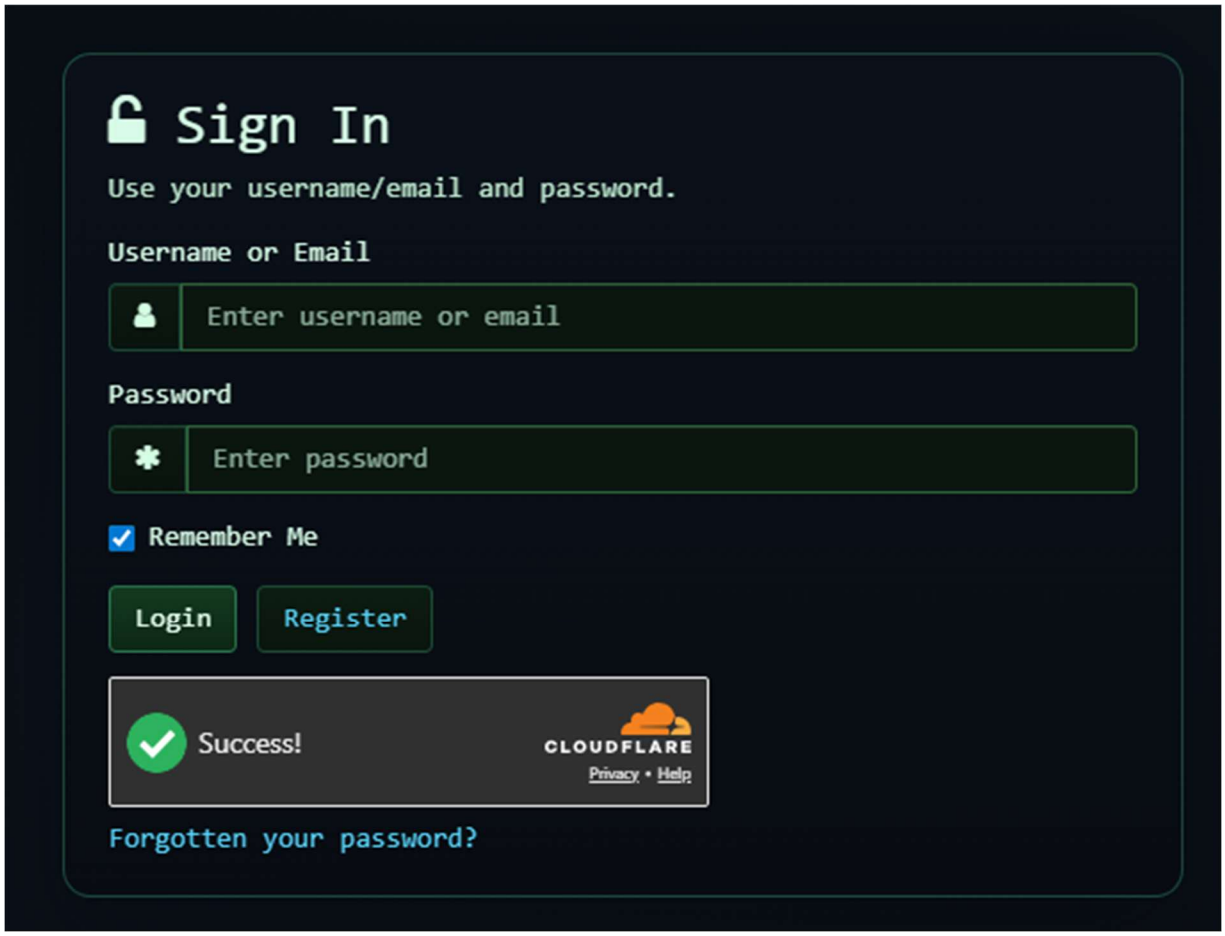
    alt.binaries.newzbin
    alt.binaries.mojo

     bytes="102394" number="1">123456789abcdef@news.newzbin.com
     bytes="4501" number="2">987654321fedbca@news.newzbin.com
```

You can copy what https://www.nzb.life/ has then it can be changed later.

There are only two links on this main page: Login & Register

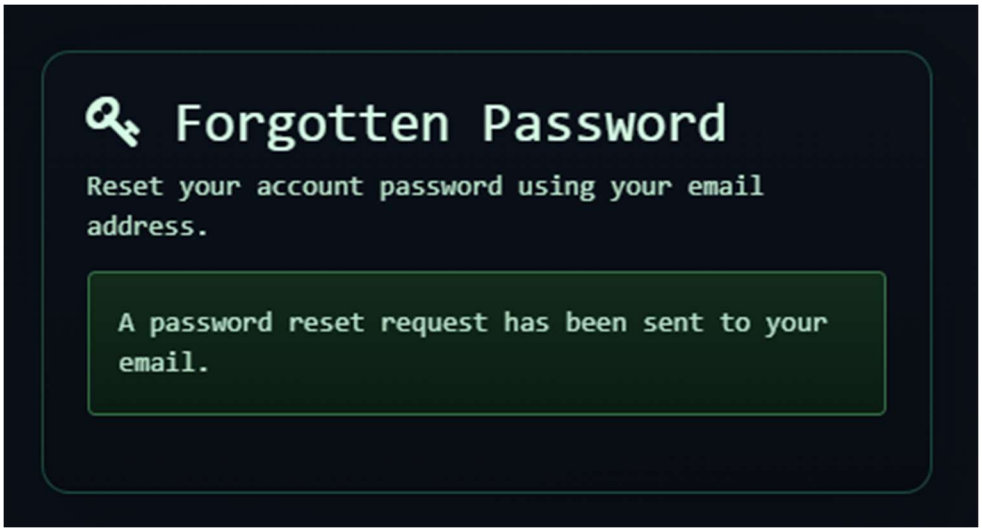
If you click Login this is how it looks:



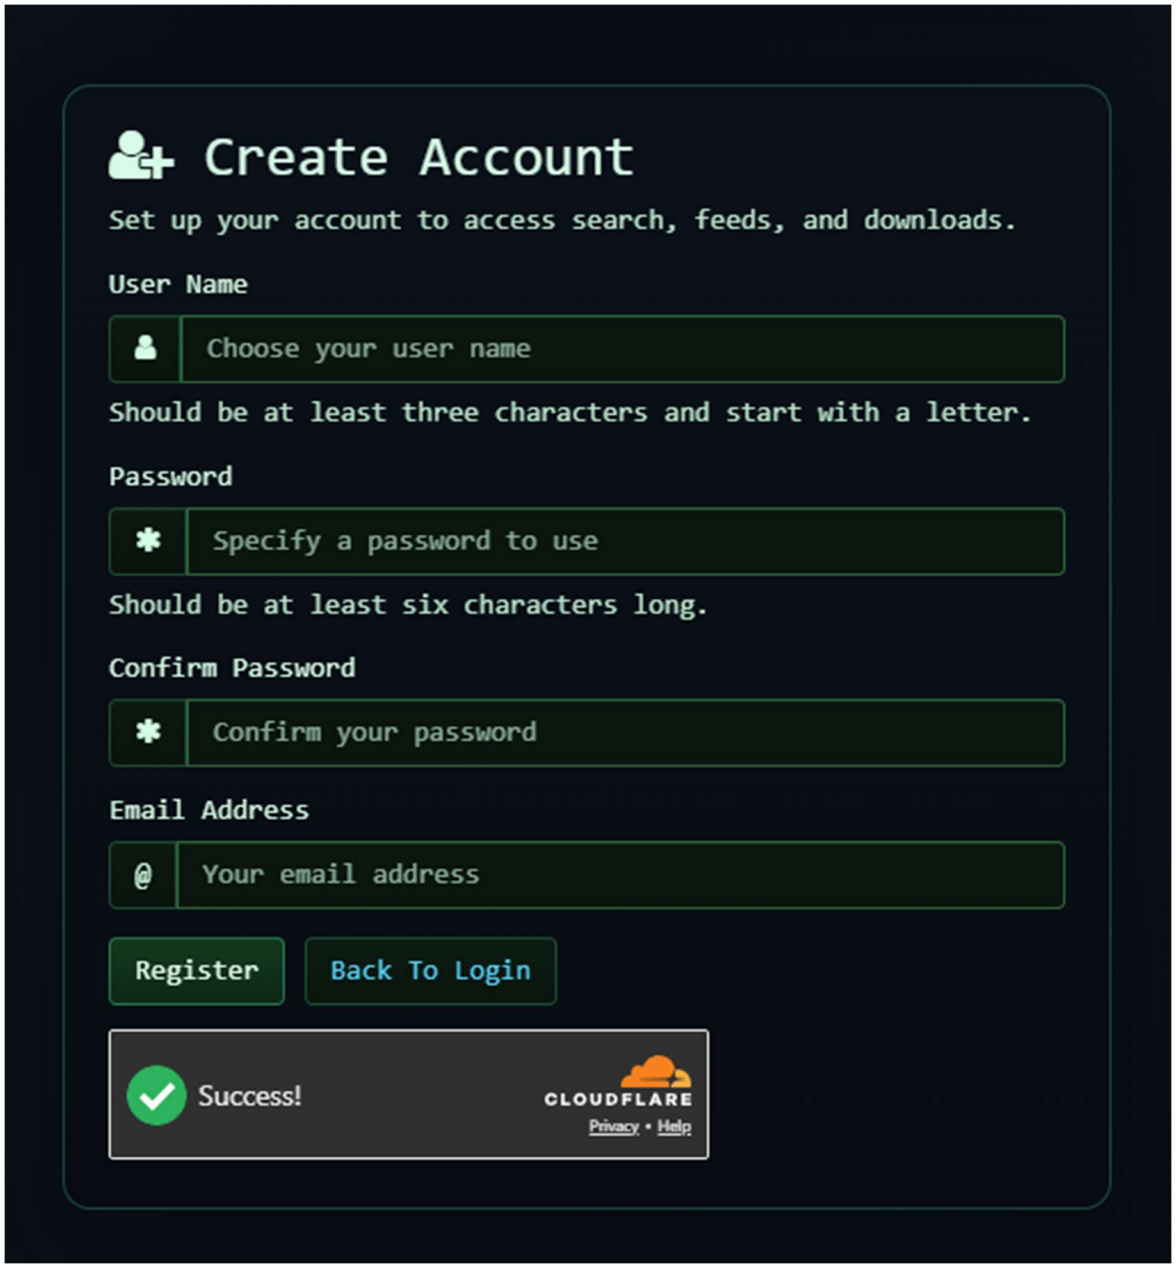
If you enter the wrong login information this what you get:

On the Login page there is a Forgotten your password link:

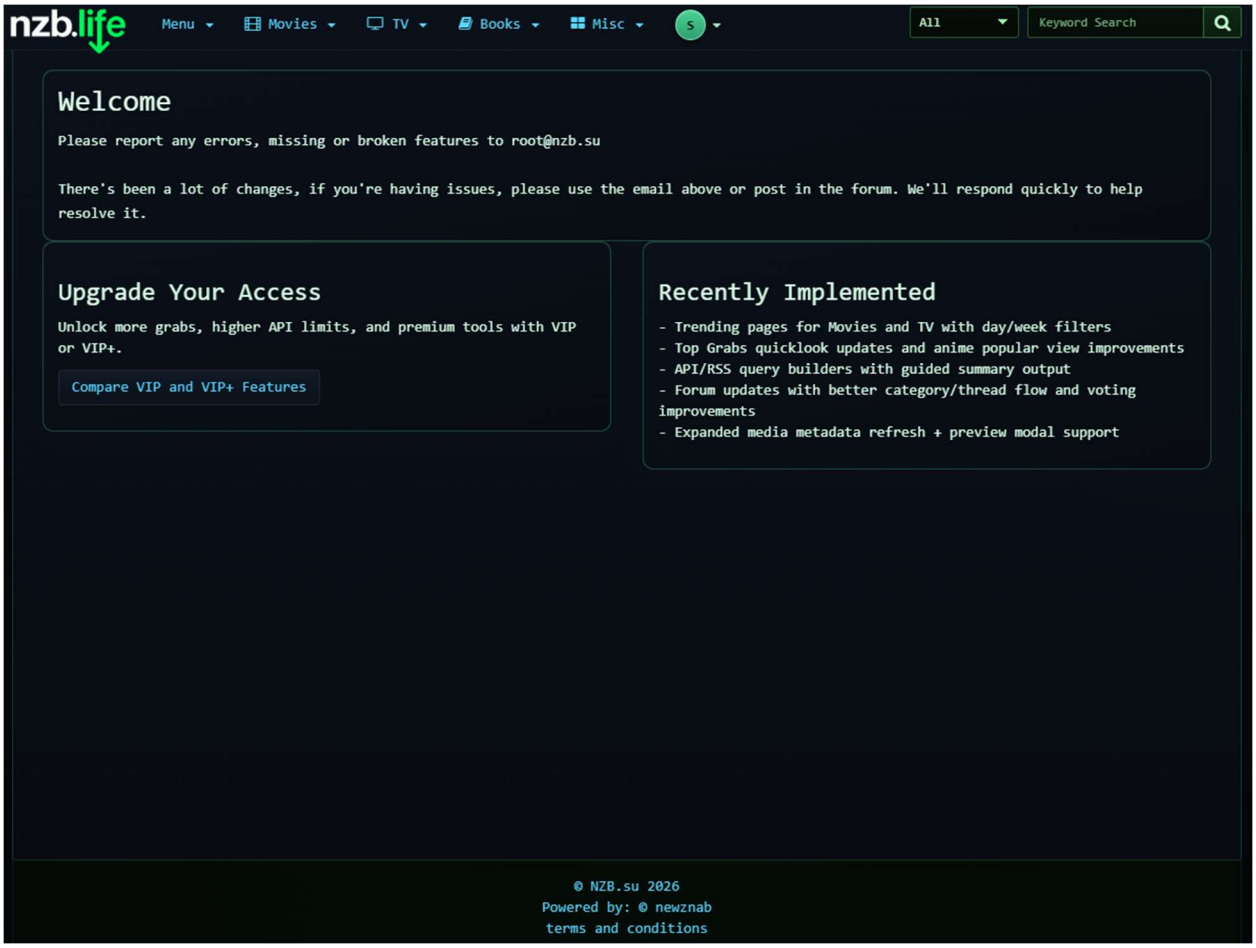
Here is what you get after clicking the Request Password Reset link on the forgotten password page:



If you click on Register this is how it looks:



This is what you get after you login or successfully register:

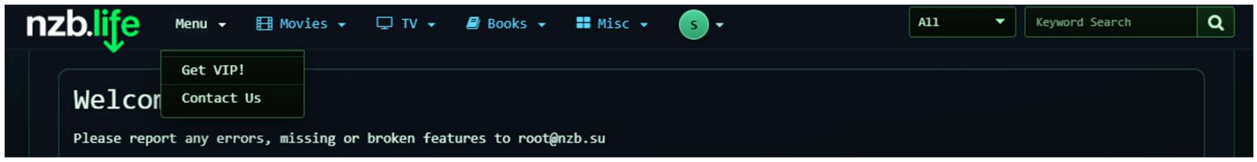


This is the dashboard page, basically the home page after you login

There is a menu at the top remove the Books option, leave the other ones, but they won't do anything yet and will be repurposed

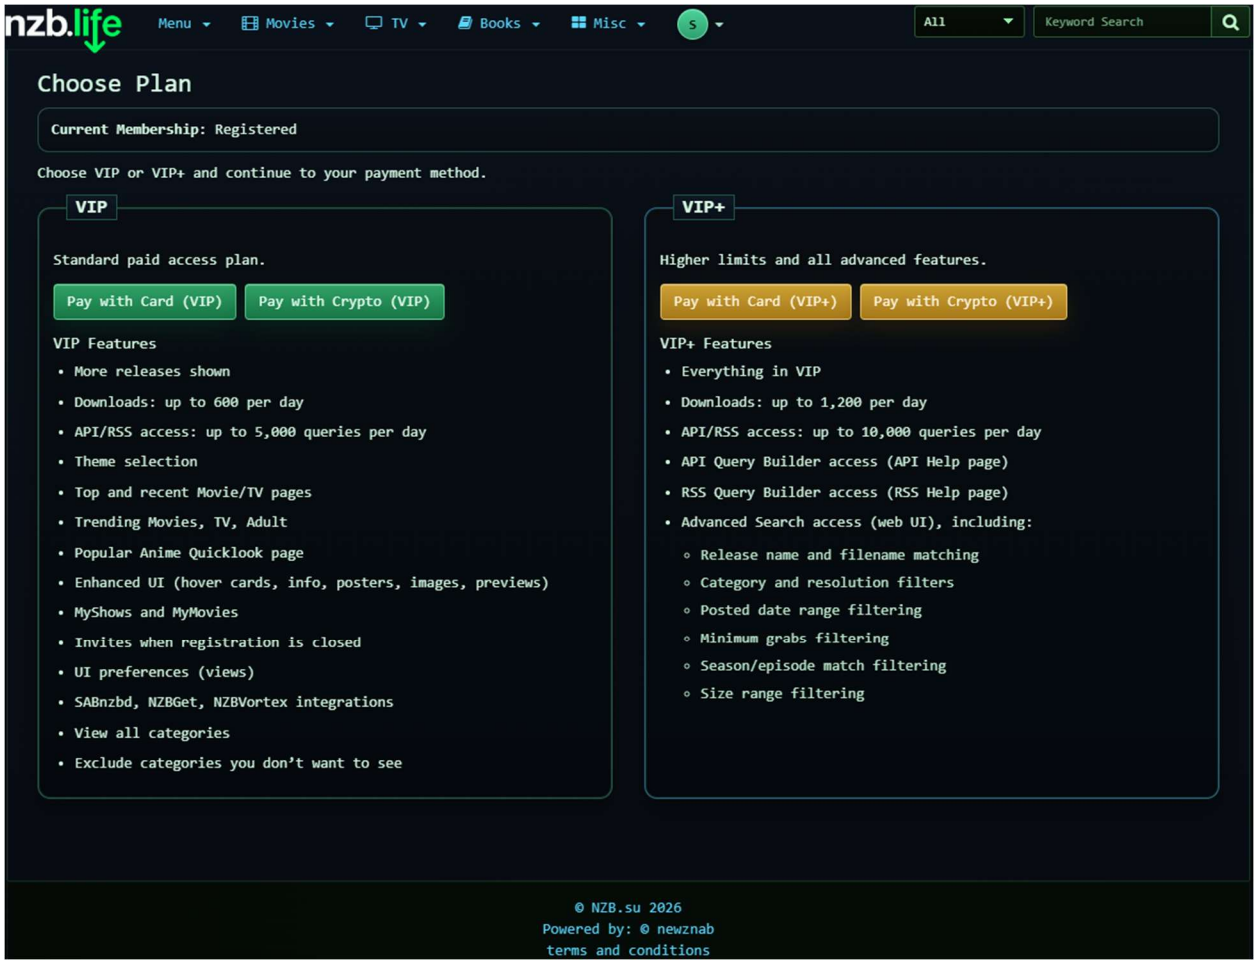
The Movie, TV, Misc menu items should do nothing when you hover or click them, remove the down arrow/sub menu for them as they won't have any in the future

The Menu has 2 drop down menus that we want to keep:

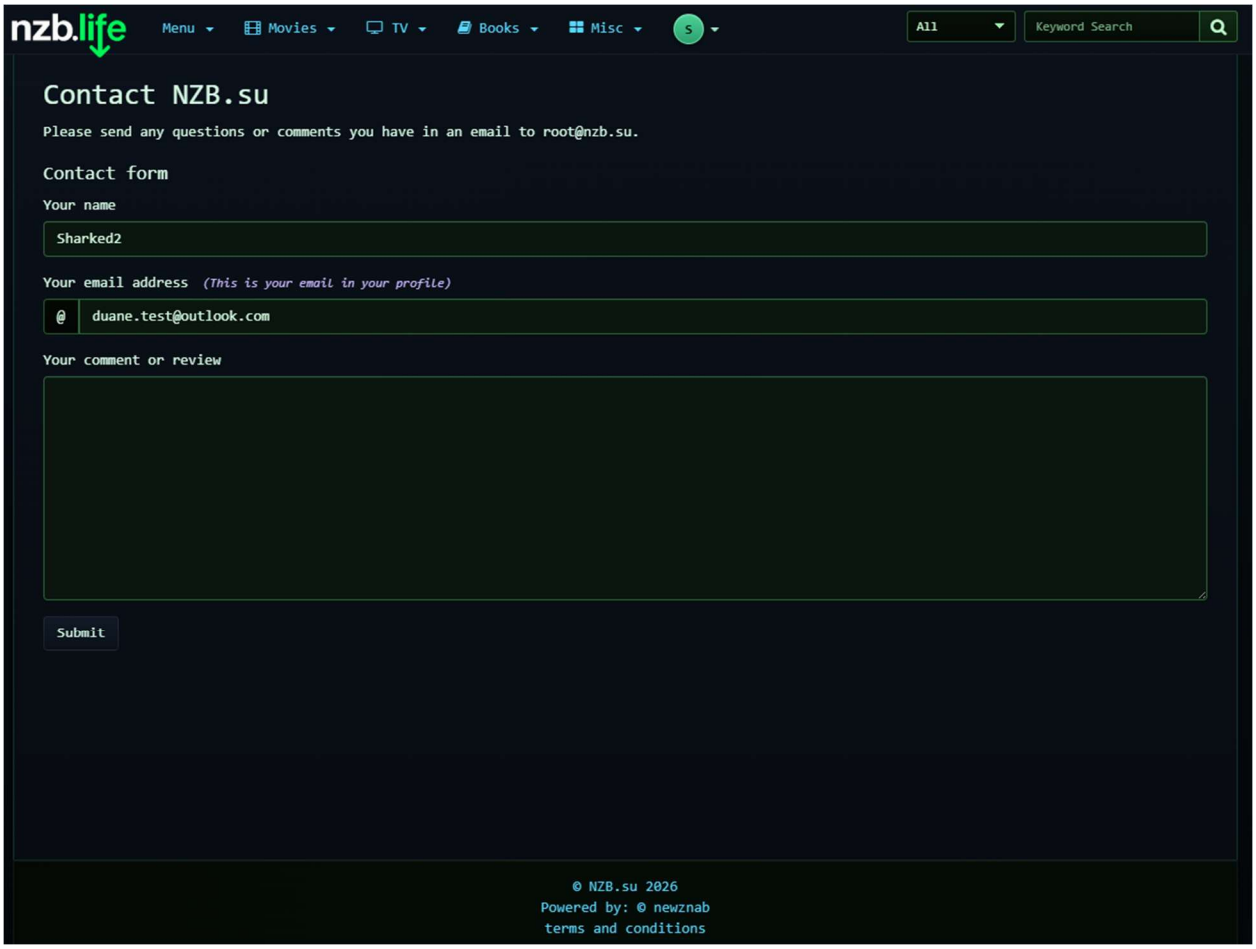


Get VIP & Contact Us

Getvip page looks like;

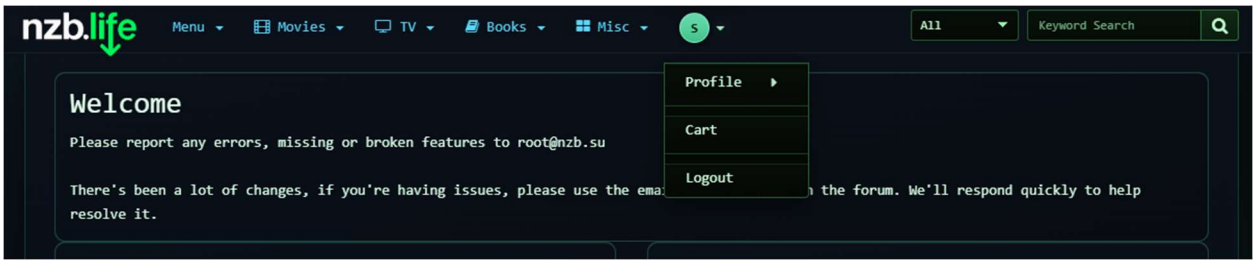


Contact us looks like:



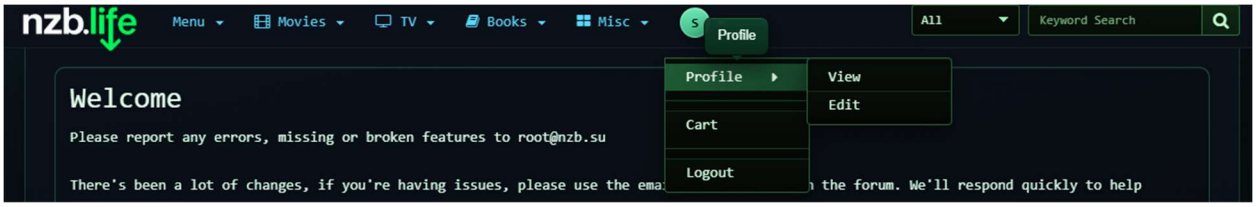
(should use sendgrid API same as the nzbgeek example site)

The Profile menu uses the first letter of your username as the icon, I really like that, when you click on it you get:



Cart menu item you can remove

The Profile sub menu has two options: View & Edit:



View looks like:

We don't need: Grabs Today, Grab Total

The Logout Session on IP Change, is a nice feature, this would pair well with the fields we added on the other nzbgeek site example:

register_ip, last_ip

we should also capture date-timestamp:

registered_at & lastlogin_at

Edit looks like:
